

COMPLEX IN KASSEL

Commercial complex

Group work with Yang Xu

September 2020

Site: Friedrichsplatz, Kassel, Germany

The site is in the center of Kassel, connecting the commercial blocks, central park and the Fulda river. The new complex with a big scale reacting to the park as the northern border, is formed by the road network of the city fabric. Along with the angle of the road breaking into the grid system, the main path cuts into the ground floor with a smooth curve, inviting people to walk through the complex and reach the main axis of the central park. Facing the park, the horizontal facade is simple and transparent, exposing the structure. Inner space is automatically decided and combined with functional areas following the main path and curve surface.
